Talk's Plan

Conclusion, current and future work

 $\begin{array}{l} \lambda_{d\mathcal{B}} : \mbox{ the } \lambda\mbox{-calculus in de Bruijn Notation} \\ \mbox{The intersection type system for } \lambda_{d\mathcal{B}} \\ \mbox{Subject reduction for } \lambda_{d\mathcal{B}} \mbox{ with } \square \mbox{ types} \\ \mbox{Conclusion, current and future work} \end{array}$

Programs & types λ -calculus with nameless dummies Intersection types

Motivation: programs & types

- Nowadays it is well known the relation between programs and types.
- $\lambda\text{-calculus}$ is the theoretical framework in the development of programing and specification languages.
- Develop more elaborated systems of types is necessary!

λ -calculus in de Bruijn notation

- Invented by Nicolaas Govert de Bruijn [dB72].
- Own the same properties than the λ -calculus with names.
- It avoids necessity of α -conversion.
- Used by some explicit substitutions calculi. (e.g. $\lambda \sigma$, λs_e).

▶ JumpdB

Subject reduction for λ_{dB} with \Box types

Lemma (Generation)

1 If
$$\underline{n}: \langle \Gamma \vdash U \rangle$$
, then $\Gamma_n = V$ where $V \sqsubseteq U$.

2 Let
$$\lambda.M: \langle \Gamma \vdash U \rangle$$
:

•
$$U = \omega$$
 or $U = \sqcap_{i=1}^{k} (V_i \rightarrow T_i)$
where $k \ge 1$ and $\forall i, M : \langle V_i, \Gamma \vdash T_i \rangle$, if $sup(M) > 0$.

•
$$U = \omega$$
 or $U = \prod_{i=1}^{k} (V_i \rightarrow T_i)$
where $k \ge 1$ and $\forall i, M : \langle nil \vdash T_i \rangle$, otherwise.

Changes in typings for lifting and β -substitution

Lemma (Typings for lifted terms)

If $M : \langle \Gamma \vdash U \rangle$ and $0 \le i < sup(M)$, then $M^{+i} : \langle \Gamma_{< i} \cdot \omega \cdot \Gamma_{> i} \vdash U \rangle$

Lemma (Typings for β -substitution)

Let $M: \langle \Gamma \vdash U \rangle$, for sup(M) > 0, and $N: \langle \Delta \vdash \Gamma_i \rangle$:

• $\{\underline{i}/N\}M: \langle (\Gamma_{< i}, \Gamma_{> i}) \sqcap \Delta \vdash U \rangle,$ if $\underline{i} \in FI(M)$ and $sup(N) \ge i-1$.

$$\{ \underline{i}/N \} M : \langle \Gamma_{\langle i} \cdot \Gamma_{\rangle i} \vdash U \rangle,$$

if $\underline{i} \notin FI(M).$

Subject Reduction

Theorem (Subject Reduction in λ_{dB})

If $M: \langle \Gamma \vdash U \rangle$ and $M \longrightarrow_{\beta} N$, then $N: \langle \Gamma \downarrow_{N} \vdash U \rangle$.

 $\begin{array}{l} \mbox{Motivation}\\ \lambda_{dB} : \mbox{the } \lambda \mbox{-calculus in de Bruijn Notation}\\ \mbox{The intersection type system for } \lambda_{dB}\\ \mbox{Subject reduction for } \lambda_{dB} \mbox{ with Π types}\\ \mbox{Conclusion, current and future work} \end{array}$

Conclusion, current and future works

- λ -calculus in de Bruijn notation with a system of intersection types has been proved to preserve subject reduction.
- This is the first step towards the construction of adequate explicit substitutions calculi in de Bruijn notation using intersection type.
- Principal typings property has to be guaranteed because this property supports the possibility of true separate compilation and compositional software analysis [Wel02].
